CROSSINGS AMID CLIMATE CHANGE: RECONNECTING CALIFORNIA'S LANDSCAPES

MARCH 21, 2022 | 12:30–1:45 P.M.

»» REGISTER ON ZOOM

California is one of the world's biodiversity hot spots, with a remarkable richness of plants and animals. Many animals in our state, from cougars to salmon, are threatened by climate change and other stressors, including roads and infrastructure that fragment habitat. A movement is growing to reconnect habitat through wildlife crossings and habitat restoration as part of the state's conservation efforts. Can we do what it takes to reconnect habitat at the scale and pace that the climate crisis demands? Join us for a conversation with leaders helping to answer these questions.
